

Partner Benefits

Auto-installation

Turnkey application

100% Web Based

Secure & scalable

Supports customer-built and 3rd party SCORM & AICC courses

Runs behind a Firewall or can be externally hosted

Built-in status reports

Connects to organizations' HRMS and administrative systems

Built-in exams and reports

Promotes collaborative learning

Quest CE eLearning Solution

Our eLearning solution combines the most popular features from Course, Assessment, and Learning Management Systems into a single, affordable turnkey eLearning application. With auto-install and built-in authoring tools, organizations can literally begin to deliver world-class learning within days.

Create Superior Learning

Quest CE's LMS is all about providing customers the ability to create and deliver effective learning and assessments as quickly as possible. Our LMS allows users to achieve this through a variety of means:

- Built-in course and exam authoring tool supports over 30 file types and requires no HTML knowledge
- Import third-party SCORM or AICC compliant courses
- Upload industry standard courses from popular authoring tools

The Alternate Language System allows for content to be easily converted to various languages for true global eLearning.

Deliver Effective Learning

Collaboration is central to the effectiveness of learning. The ease by which all the built-in sharing and communication tools may be accessed from within the LMS enhances the quality of instruction. From the same online "class" environment, learners can email their classmates and instructors, chat in real time, share files, take notes, receive assignments, link to external sites, and join threaded discussions. Self-grading exams and surveys are an essential tool for gauging learner proficiency.

Manage Diverse Learning

Quest CE's web-based Administration functions enable users to configure the whole system, including setting-up permissions, remote and batch registration, creating multiple ports and choosing languages. Multiple types of learning from live learning events to online courses can be managed from a central location. Built-in reports track all kinds of system, course and learner data as well as provide learners and managers with performance status.

QUEST CE

System Administration	
Registration	<i>Remote Registration, Batch Loading, Active Directory Integration, eCommerce capable</i>
Security	<i>User Name/Password, Single Socket Layer</i>
Configuration	<i>Style sheets for easy conversion to desired look & feel</i>
Portals and Hierarchy	<i>Create unlimited customizable ports with 10 Hierarchy levels</i>
